ABSTRACT:

A system and method of interactive cataloging of products and services by end users across multiple sales and marketing channels provide each end user with access to domain-independent catalog data from a plurality of vendor organizations through a catalog server system. Anonymous end user cataloging actions of products and/or services across multiple manufacturing, distribution, and retailing channels create personalized profile instances that are based on stored vendor catalog profile templates in the catalog server system, and stored in the end user's personalized electronic catalog as pre-sale digital receipts. An end user's personalized electronic catalog(s) can be shared with peers using mutual agreement permissions as managed by the catalog server system. Pre-sale digital receipts are used to provide a safe, secure, and convenient method for modifying an end user's actionable cataloged items from a pre-sale status to purchased status when purchased and to provide a traceable audit trail for each cataloged item or purchased item in order to facilitate respective pre-sales channel activities and post-sales channel support and services.

## ABSTRACT:

The present invention is related to methods and systems for correlating telecommunication antenna infrastructure placement information to provide telecommunication quality of service information. In one embodiment, a system includes a database configured to store cellular antenna location information for a plurality of cellular antennas associated with a first

service provider, and to store cellular antenna placement information for a plurality of antennas associated with a second service provider. The system further includes a first instruction configured to transmit a request over a network to a first terminal for a user to identify a first location in which the user intends to utilize cellular service, a second instruction configured to request the user to identify a travel route connecting to the first location on which the user uses cellular service, a third instruction configured to determine the cellular coverage provided by the first service provider for areas along the travel route.

ABSTRACT:

A system, method and article of manufacture are provided for life cycle network asset management in a network based supply chain. In accordance with an embodiment of the present invention, the supply chain network is monitored, and events from network assets are received, filtered, and correlated, whereby problems with network assets are further isolated. The filtered and isolated events problems are then translated into a standard object format for facilitating the determination of the life cycle of problem network assets, wherein the events are translated by a comprehensive library of all possible message types provided by the custom software interfaces. In accordance with an embodiment of the present invention, the network assets include both packet-switched and circuit-switched network assets, and the events are received by custom software interfaces which communicate directly with the network assets.

## ABSTRACT:

A system, method and article of manufacture are provided for collaborative installation management in a network-based supply chain environment. According to an embodiment of the invention, telephone calls, data and other multimedia information are routed through a network system which includes transfer of information across the internet utilizing telephony routing information and internet protocol address information. The system includes integrated Internet Protocol (IP) telephony services allowing a user of a web application to communicate in an audio fashion in-band without having to pick up another telephone. Users can click a button and go to a call center through the network using IP telephony. The system invokes an IP telephony session simultaneously with the data session, and uses an active directory lookup whenever a user uses the system. Users include service providers and manufacturers utilizing the network-based supply chain environment.
